GC log file: **gc-2017_07_28-11_58.log.0**

Duration: **1 hr 10 sec**

🕒 Application waiting for resources ⚠️

It looks like your application is waiting due to lack of compute resources (either CPU or I/O cycles). Serious production applications shouldn't be stranded because of compute resources. In **24 GC event(s)**, 'real' time took more than 'usr' + 'sys' time.

🕒 System Time greater than User Time ⚠️

In **1 GC event(s)**, 'sys' time is greater than 'usr' time. It's not a healthy sign.

💧 Memory Leak ⓘ

No major memory leaks.

(**Note:** there are [8 flavours of OutOfMemoryErrors](https://tier1app.files.wordpress.com/2014/12/outofmemoryerror2.pdf) (https://tier1app.files.wordpress.com/2014/12/outofmemoryerror2.pdf). With GC Logs you can diagnose only 5 flavours of them (Java heap space, GC overhead limit exceeded, Requested array size exceeds VM limit, Permgen space, Metaspace). So in other words, your application could be still suffering from memory leaks, but need other tools to diagnose them, not just GC Logs.)

📄 Consecutive Full GC ⓘ

None.

📄 Long Pause ⓘ

None.

🕒 Safe Point Duration ⓘ

(To learn more about SafePoint duration, [click here](https://blog.gceasy.io/2016/12/22/total-time-for-which-application-threads-were-stopped/) (https://blog.gceasy.io/2016/12/22/total-time-for-which-application-threads-were-stopped/))

Not Reported in the log.

❓ GC Causes ⓘ

(What events caused the GCs, how much time it consumed?)

Not reported in the log.

🔄 Tenuring Summary ⓘ

Not reported in the log.

📄 Command Line Flags ⓘ
